Dr. Alan A. Boghosian

“Contemporary and Classic Restorative Materials: Achieving Predictable Clinical Success”

Open to Doctors Only— Wednesday, April 20, 2016

7:30am - 8:30am Registration and Full Breakfast

8:30am - 11:00am Lecture

11:00am - 11:30am Coffee Break

11:30am - 2:00pm Lecture

Dr. Alan A. Boghosian is a Clinical Associate Professor in the Department of Otolaryngology-Head and Neck Surgery, Division of Dentistry at Northwestern University’s Feinberg School of Medicine where he coordinates laboratory and clinical research investigations. Dr. Boghosian maintains a private practice in downtown Chicago devoted primarily to restorative dentistry. He has authored numerous publications and has lectured internationally on the subjects of dental materials and restorative procedures. Dr. Boghosian is a member of the International Association of Dental Research and a Fellow in the American College of Dentists and Academy of Dental Materials. He formerly was chairman of the working group on materials, instruments and equipment of the Council on Scientific Affairs of the American Dental Association and currently serves as a consultant to the council.

New materials and techniques are introduced on a daily basis. Many restorative materials exist today that were not deemed possible a decade ago as a result of new discoveries. However, the clinical performances of some contemporary materials offered today are not as efficacious as those released 10 years ago. This presentation will compare the advantages and benefits of proven classic materials and techniques to that of the latest products. The morning session will review a variety of the materials and techniques used in fixed prosthodontic procedures. Adhesion and composite restorative dentistry will be the focus of the afternoon program.

Amongst the topics to be presented are:

- Restoration of the endodontically treated tooth
- Predictable pre-impresion soft tissue management
- Review of adhesive systems which include laboratory and clinical trial results
- Physical properties relating to the clinical usage of impression materials
- Altering the surface characteristics to achieve consistent perfect impressions
- Adhesive systems and adhesive restorable materials
- Optimal methods for finishing and polishing composite materials
- Latest improvements in impression materials
